

Slō Tablets is a specially formulated; cherry flavoured thickened liquid that makes tablets safer to swallow.

Provided ready to use Slō Tablets matches the IDDSI 4 (Stage 3, extremely thick) flow rate so can be used by those on IDDSI: 1, 2 and 3 fluids.

It is virtually chemically inert and compares to the Ph level of the stomach (4.2pH) so can safely be used with a wide range of tablets and other solid dose forms.

It has been subjected to over 100 scientific compatibility studies and as a result with the exceptions of: effervescent and crushed tablets; rapid dissolving, sustained release medication or those containing Iodine - you can use Slō Tablets with Medical pills, tablets and (liquid containing) capsules, vitamin preparations, food supplements and other solid dosage forms meant to be swallowed

How to use Slō Tablets

Put the tablet on a spoon, and cover it with approximately 10mls - one small depress of the dispenser - of Slō Tablets the contents of the spoon and finish with a Slō Water if necessary.
